Magellan Healthcare SmartScreener

Better outcomes through early diagnosis of behavioral health conditions

Short appointment windows. Lack of awareness. Problems integrating screening and practice guidelines. Providers face many challenges to screening and treating mental illness in the primary care setting. Magellan Healthcare's SmartScreener* can help.

- **Standard screening tools used by behavioral health professionals** give providers a quick, easy way to identify patients' behavioral health risks early and before they result in an ED visit or admission.

- **Color-coded overviews of patients' screener results** and levels of severity allow medical staff to quickly triage and refer patients using automated alerts or the administrative portal from their workstations.

- **Robust reporting dashboard** features aggregate and population-specific program utilization and condition-specific reporting to help tailor and coordinate care collaboration and track member progress.

- **Medication-free, evidence-based recommendations** for next steps, ranging from member education to digital cognitive behavioral therapy and care management, help improve members' behavioral health and comorbid health conditions.

When individuals are identified in a primary care setting and successfully engaged in behavioral healthcare, there is substantial improvement in their overall health and well-being. To learn more about Magellan Healthcare's SmartScreener, please contact us at gensales@magellanhealth.com.

52% of primary care patients
screened with SmartScreener screened positive for a condition and were successfully guided to appropriate levels of care.[1]

Up to 60% of patients
with inpatient behavioral health admissions have not received prior behavioral health treatment.[2]

90% of engaged patients
rate the programs as helpful and useful.[3]
