

Substance Use Disorder

Magellan Healthcare's steadfast, life-changing services

More than 20 million Americans live with a substance use disorder (SUD), for which only 10% receive treatment.¹ 40% of Americans have comorbid SUD and other mental illnesses, such as anxiety or depression.² SUD can lead to physical health problems and impair an individual's ability to work, attend school, and maintain positive relationships with friends and family.

Whether it is a problem with alcohol, opioids or other substances, Magellan Healthcare understands the implications of SUD. Our end-to-end solution helps individuals through programs designed and led by industry-leading clinical staff and evidence-based approaches.

Identify

- ✓ **Predictive analytics**—Algorithms identify at risk individuals:
 - Multiple prescribers
 - Pharmacy multiplicity
 - Risk for addiction after pain management (e.g., post-op)
- ✓ **SmartScreener**—Digital deployment of the DAST/AUDIT:
 - Enables individuals to self-screen and take advantage of self-help tools.
 - Helps PCPs identify at-risk patients and recommend next steps when implemented in the primary care setting.

Treat

- ✓ **Clinical pathways**—Members receive evidence-based care and individualized outreach and resources based on their risk level and comorbid conditions.
- ✓ **Emotional wellness tools**—Our online health tools and programs help reduce alcohol and substance use and help address SUD-related depression.
- ✓ **Collaborative care and case management**
 - Connects members with behavioral and medical experts and community supports.
 - Facilitates provider-to-provider consultations.
 - Provides member progress monitoring.

Up to 53%

decrease in inpatient admissions through peer support programs.³

\$9,300

average savings per participant through collaborative care and case management.⁴

Treat continued

- ✔ **High-performance network**
 - Addiction experts partner with providers.
 - Evidence-based treatment is offered via face-to-face, telehealth and in-home MAT services.
 - Quarterly scorecards ensure our Centers of Excellence meet high care standards.
- ✔ **Office-based opioid treatment (OBOT) and medication-assisted treatment (MAT)**—We continually build and support our network of OBOT and MAT providers through education and collaboration.

Support

- ✔ **Peer support programs**—Magellan recovery support navigators provide ongoing support, helping members engage with community resources and recovery-oriented activities. They also guide, educate and support members' families through the treatment and recovery process.

Magellan understands the need for a continuum of care and offers many ways to meet your members' needs while improving outcomes and reducing costs. For more information, contact us at gensales@magellanhealth.com.
